Dear Sirs,

Hydromax™ outlets and HydroTechnic™ software

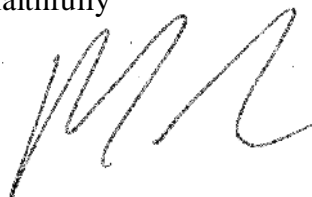

We at CRM, one of Europe's leading independent Consultant's for Siphonic Roof Drainage, along with HR Wallingford (formerly named Hydraulic Research, Wallingford) one of the world's leading research and test facilities for hydraulics, worked together on testing the HydroMax™ siphonic roof drainage system and HydroTechnic™ analytical design software program.

We are pleased to confirm that the system functioned well under all test conditions and satisfied the performance requirements of the current ruling standards for roof drainage design, BS EN 12056-3:2000 and BS8490:2007. The HydroTechnic™ analytical design program has been proven to be extremely accurate, a fact endorsed by HR Wallingford (who were previously commissioned by a UK Governmental Department to analyse siphonic roof drainage systems). We believe that due to its technically advanced calculation process, HydroTechnic™ produces calculations of unsurpassed accuracy together with user friendly features including the ability to calculate with varying piping materials.

We can confirm that the HydroMax 75 and 125 outlets (3" and 5") have been tested in accordance with standard ASME 112.6.9-2005 and BS8490:2007

Please contact me if you require any further information.

Yours faithfully

Dr. Malcolm Wearing BEng PhD CEng MICE MCIWEM
